Atlantic Energy MA, LLC – Massachusetts Disclosure Label

Electric power suppliers and distribution companies are required to provide customers with a disclosure label. The label enables consumers to look at the energy sources, air emissions, and information about the supplier's company in order to make a more informed choice of a power supplier.

Generation Price		Residential Customers			
Average price per kWh at different levels of use. Prices do not include regulated charges for customer service and delivery.	Average Use per month	250 kWh	500 kWh	1000 kWh	2000 kWh
	Average Price per kWh	.21297	.21297	.21297	.21297
	Your average generation price will vary according to when and how much electricity you consume. See your most recent bill for your monthly use and your Terms of Service for the actual price.				
	1.800.917.9133				
	Contract Term: 24 months Contract Type: variable rate				
Power Source	Power Source	Known Source	System Power	Total	
Generation by fuel type as a percentage of total generation is supply by ISO-New England who operates the regional power mix. January 1, 2021-December 31, 2021	Biomass		1.67%		
	Coal		.46%		
	Hydroelectric		9.19%		
	Solid Municipal Waste		1.8%		
	Nuclear		19.82%		
	Natural Gas		36.79%		
	Oil		3.9%		
	Solar		4.01%		
	Imported		12.99%		
	Wind		5.11%		
	Other		4.3		
	Total		100%		
Carbon Dioxide (CO2), nitrogen oxides (NOx), sulfur dioxide (SO2) emission rates from these sources, relative to the regional average is compared to emissions from a new unit as determined by the Mass Department of Environmental Protection.	Air Emissions per 2021 in pounds per megawatt hour:				
	Category	CO2	NOx	SO2	
	New England	738.14	.657	.375	
	Imports	183.15	.237	.08	
	New Unit	895	.06	.01

Labor Information	24% of the electricity from System Power came from power sources with union contracts with their employees.				

Label Definitions

Generation Price: The Generation Price does not include charges for Distribution Service, other Department regulated services or other non-generation products of

services. All customers are offered the same monthly variable rate or fixed rate ($\text{\$/kWh}$) based on the applicable Agreement Terms of Service). The price does not change with usage level. See your most recent bill for your monthly use and actual prices. Contact Atlantic Energy Massachusetts, LLC for more information.

Power Sources: Atlantic Energy procures its electricity supply, on behalf of its customers, from system power contracts, not from specific generating units. The electricity you consume comes from the New England power grid, which receives power from a variety of power plants and transmits the power throughout the region as needed to meet the requirements of all customers in New England.

System Power represents power purchased in the regional electricity market. The System Power distribution presented in the table is based on the most recently available information provided via the NEPOOL Generation Information System. When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Known Resources include resources that are owned by, or under contract to, the supplier. System Power represents power purchased in the regional electricity market. Biomass refers to power plants that are fueled by wood or other plant matter.

Emissions for each of the following pollutants are presented as a percent of the regional average emission rate. Arrows represent the emission rate from a hypothetical new generation facility.

Carbon Dioxide (CO₂) is released when fossil fuels (e.g., coal, oil, and natural gas) are burned. Carbon dioxide is a greenhouse gas and a major contributor to global warming.

Nitrogen Oxides (NO_x) forms when fossil fuels and biomass are burned at high temperatures. They contribute to acid rain and ground-level ozone (or smog), and may cause respiratory illness in children with frequent high level exposure. NO_x also contributes to oxygen deprivation of lakes and coastal waters which is destructive to fish and other animal life.

Sulfur Dioxide (SO₂) forms when fuels containing sulfur are burned, primarily coal and oil. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. SO₂ combines with water and oxygen in the atmosphere to form acid rain, which raises the acid level of lakes and streams, and accelerates the decay of buildings and monuments.

Labor Information The information on this label regarding whether generators or suppliers operate under collective bargaining agreements is provided to inform you about whether the energy was produced in plants where employee wages and working conditions are mutually determined by employees and management, and protected by union contracts. The information in this label regarding the use of replacement employees during a labor dispute is provided to inform you of whether or not a generator or supplier, during a strike by or lock-out of its employees, has replaced them with other workers.
